Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Team ID	6ab8c2c230f9767f87730236
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value

Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Authentication	Register/login users and validate credentials.
FR-2	Role Management	Create roles and assign permissions to users.
FR-3	Record Management	Create, view, update and delete records according to permissions.
FR-4	Field-Based ACL	Define rules using record field values, such as department, status or owner.
FR-5	Script-Controlled Access	Execute configured ACL logic to allow or deny record access dynamically.
FR-6	Access Audit	Record user, record, action, decision and timestamp for access attempts.
FR-7	Administration	Allow administrators to create, update, enable or disable ACL rules.

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Provide a simple web interface for managing records, roles and ACL rules.
NFR-2	Security	Enforce authentication, authorization, field-level restrictions, HTTPS and secure password storage.
NFR-3	Reliability	Deny access when an ACL rule cannot be evaluated safely and maintain audit records.
NFR-4	Performance	Use indexed database fields, pagination and efficient rule evaluation for fast record requests.
NFR-5	Availability	Support deployment with automatic service restart and managed/replicated database options.
NFR-6	Scalability	Allow API, ACL engine and database resources to scale independently.
